Abstract

The paper presents the way to determine the required heat power for heat source diagnostics for the existing residential building. For this purpose, it was proposed to designate the required thermal power of the building using the original method of multiple short heat consumption measurement in existing residential building with natural ventilation.

Streszczenie

W artykule zaprezentowano określanie wymaganej mocy cieplnej dla diagnostyki źródła ciepła istniejącego budynku mieszkalnego. W celu zaproponowano wyznaczenie wymaganej mocy cieplnej budynku z wykorzystaniem oryginalnej metody kilkukrotnego krótkiego pomiaru zużycia ciepła w istniejącym budynku mieszkalnym z wentylacją naturalną.

Keywords: Heating, ventilation; In- situ thermal diagnostics; Heat source; Thermal power of the building; Thermal characteristics; Existing residential building; Heat consumption measurements.
